

To Whom It May Concern,

I am pleased to recommend Jared Malcolm as a high-level contributor in software engineering. I have witnessed him deliver both as an individual contributor and as a leader and he is fantastic at both! Over the course of working with Jared, I have consistently been impressed not only by his technical depth and engineering judgment, but also by his leadership, mentorship, and steady professionalism.

Jared is the type of engineer every project team hopes to have. He brings strong technical skills, good judgment, and a steady approach that helps keep projects moving forward, especially in fast-paced environments. During our time working together at Tensure Consulting, he consistently took ownership of complex workstreams, helped mentor junior engineers and interns, and was someone the team trusted to work through difficult technical challenges collaboratively.

On recent projects, Jared played an important role in resolving frontend architecture and data-fetching issues involving Next.js, React Query, and state management patterns, while also helping coordinate pull request reviews and CI/CD efforts across the team. He communicates clearly, stays calm under pressure, and is always willing to help teammates think through problems or unblock issues.

In addition to being a strong engineer, Jared is also a great consultant. He understands how to balance technical decisions with delivery goals and business needs while leveraging his soft skills to make him valuable in both leadership and individual contributor roles. I would strongly recommend him for any senior engineering or technology leadership opportunity.

I highly recommend him for your consideration.

Sincerely,

David McGee
